

TRUE-ACTION SLOTTED TRACK

RESPONSIVENESS, SERVICE, QUALITY

HEAD OF WALL DEFLECTION SYSTEM

WHAT IS TRUE-ACTION SLOTTED TRACK - HEAD OF WALL DEFLECTION SYSTEM?

True-Action™ Slotted Track is the industry preferred system for achieving head-of-wall deflection and fire resistance for interior and exterior walls. It meets movement and cycling requirements for ANSI/UL 2079 and is UL Classified for 1, 2, 3, and 4 hour fire-resistant ratings in head-of-wall fire-rated joint systems.

BENEFITS

- Fire-rated deflection system
- UL Classified in over 80 approved fire-rated systems
- Standard Slotted Track allows up to 1½” of vertical movement
- Custom shapes and slot sizes available
- Custom widths and thicknesses available
- Positive attachment provided for wall strength
- Absorbs head-of-wall and floor extension or compression movement
- Integrated with traditional wall systems
- Easy installation reduces labor costs

PRODUCT SIZES:
2.50" MINIMUM
8.00" MAXIMUM

MATERIAL GAUGES:
.030" MINIMUM
.071" MAXIMUM

- Note:
1. Based on testing and analysis by Structural Testing and Research (STaR) Report No. 3160903 dated March 29, 2010 (Amended May 19, 2010).
 2. Testing based on maximum 7/8" gap between end of stud and track web.
 3. Testing based on #8 screws each leg for 33-mil track, #10 each leg for 43, 54 and 68-mil track. All screws were pan head, 0.43 inch head diameter.
 4. Loads have not been modified for duration of load.

Notes:

- Gross properties are based on the full section away from flange slots.
- Net area is based on the section through the flange slots.
- Weight is nominal weight of the gross section, not reduced for flange slots.
- Effective properties are calculated in accordance with the 2007 NASPEC with 2010 Supplement (AISI S100-07/S2-10).
For effective flange widths, the compression flange (before local buckling) is taken as the portion of the flange between the web and the slot (the slot and any steel beyond the slot is considered absent). The tension flange is taken as the net flange at the slots.
- Cold-work of forming has not been considered for effective properties.
- Web width-to-thickness ratio exceeds 200. Web stiffeners are required at points of concentrated loads or reactions.
- IBC 2006, 2009, and 2012 compliant.

RESPONSIVENESS, SERVICE, QUALITY

www.tellingindustries.com

1. Install floor track, secure with screws.

2. Install slotted track on ceiling, secure with screws.

3. Cut stud 7/8" short.

4. Twist studs into the track.

5. Screw studs to bottom track.

RESPONSIVENESS, SERVICE, QUALITY

www.tellingindustries.com

6. Screw studs to slotted track. Screw into the center of the track slot.

7. Cut gypsum 1-1/2" short of CLG. Attach gypsum with screws.
 8. Install 5/8" gypsum board. Attach gypsum with screws.
 9. Install top screws 3-4" below CLG.
 NO gypsum screws through slotted track.

9. Install mineral wool 2 x 2 strips.

10. Install insulation.
